

Analytical Chemistry Master Diploma Work Projects

Diploma projects in Analytical Chemistry at the advanced level can be supervised by researchers at MMK and ACES or any other departments at Stockholm University. The master degree program in Analytical Chemistry is administrated and examined by MMK and it is important to ensure that all diploma projects fulfil the learning goals. Project descriptions are collected by the Diploma Projects Course Director (Course Director) in Analytical Chemistry and all projects are evaluated and finally approved by the teachers in the Masters' program in Analytical Chemistry (lärarkollegium), i.e. the teachers from MMK, ACES and other departments at SU who are significantly contributing to teaching in the Analytical Chemistry masters' program. The approved diploma projects will be presented to the students in the MSc program in Analytical Chemistry by the supervisors for the projects.

The procedure for assignment of Diploma Projects in Analytical Chemistry follows the time schedule outlined below:

1. Call for project descriptions from the supervisors.

Early April: The Course Director for the diploma projects in Analytical Chemistry sends out a call to the supervisors and students, asking them to hand in descriptions of suggested projects to the Course Director for the coming academic year starting in the autumn semester. The call will be sent out to the ACES supervisors via the ACES Director of Studies.

2. Approval of projects.

Mid/Late April: The Course Director together with the Analytical Chemistry supervisors and other lecturers at the masters' program in Analytical Chemistry approve suitable projects, and in cases where projects are not approved provide feedback to prospective supervisors about how to make the proposal acceptable.

3. Information to the Master Students and assignment of projects.

Early May: The Course Director organizes an information meeting with the Master students where the supervisors present their projects. The Course Director will go through the learning goals for the diploma work, as well as the schedule for the Diploma Project Work during the coming year. The students discuss with supervisors and Course Director and select a suitable project. The Course Director ensures that all students find a suitable project.
