

**CODEBOOK – SWEDISH 2012/2013 GGS, WAVE 2 (2015/2016)**

Wave 2 of the Swedish GGS from 2012/2013 is entirely based on data from population registers. The dataset contains socioeconomic and demographic information about the Wave 1 respondent as well as the respondent's partner (in cases where the respondent was either married to the partner or was in non-married cohabitation with the partner at the time of interview). For the respondent, socioeconomic information is available both retrospectively from the time of interview and prospectively up until 2015. Socioeconomic information about the respondent's partner is available prospectively up until 2015. Demographic information is available prospectively up until 2016.

This codebook was created by Erik Carlsson at Stockholm University Demography Unit. The codebook was last updated on August 15, 2023.

## **Highest educational level, old Swedish Educational Terminology (SUN) 1990-1999 (hutbsun)**

The source of the variable is Statistics Sweden's Register of Education, see

[www.scb.se/statistik/UF/UF0506/Produktbeskrivning\\_short\\_English\\_UF0506\\_20040101r.doc](http://www.scb.se/statistik/UF/UF0506/Produktbeskrivning_short_English_UF0506_20040101r.doc) for further information.

The variable is given as an education code according to the Swedish Educational Terminology (SUN code).

Minor changes to existing SUN codes have taken place 1990-1999.

As of 2000, the new version 'SUN 2000', which is adapted to the international ISCED 97 (International Standard Classification of Education), is used. Unlike the older SUN, SUN 2000 consists of two parts; a level module, SUN2000Niva, and an orientation module, SUN2000Inr, see [www.scb.se/statistik/UF/UF0506/SUN2000English%20version.doc](http://www.scb.se/statistik/UF/UF0506/SUN2000English%20version.doc) for further information about the SUN 2000.

**Note 1:** Using a conversion guide, the old SUN variable HEducSUN has been converted to the SUN 2000 variables for level and orientation for the years 1990-1999, see below. (Quality problems for some educational levels, 31/32 and 41/52, arise at conversion.)

**Note 2:** For its 2000 version, the Register of Education underwent major changes to improve quality, among other things a new terminology and a number of new sources, which led to a break in the time series! This means that comparisons with earlier versions must be done with great caution.

Further information about SUN and SUN2000 is available in Swedish at Statistics Sweden's website: <https://www.scb.se/dokumentation/klassifikationer-och-standarder/svensk-utbildningsnomenklatur-sun/>

## Highest educational level, aggregated to 7 “Swedish” levels 1990-2011 (sun2000niva\_old)

The source of the variable is Statistics Sweden’s Register of Education, see [www.scb.se/statistik/UF/UF0506/Produktbeskrivning\\_short\\_English\\_UF0506\\_20040101r.doc](http://www.scb.se/statistik/UF/UF0506/Produktbeskrivning_short_English_UF0506_20040101r.doc) for further information.

Aggregated level variable adapted to the Swedish educational context, which can be used both before and after the terminology change in 2000. Recommended!

The variable sun2000niva\_old has, based on the variable sun2000niva, been aggregated to 7 levels corresponding to the old SUN code’s second position (1990-1999).

Educational level (second digit in the old SUN code):	Level according to SUN 2000:
1) Primary and secondary education, less than 9 years	1
2) Primary and secondary education, 9 years (equivalent)	2
3) Upper secondary education, 2 years or less	31, 32
4) Upper secondary education, 3 years	33
5) Post-secondary education, less than 3 years	41, 52
6) Post-secondary education, 3 years or more	53, 54, 55
7) Post-graduate education	6

Note: For its 2000 version, the Register of Education underwent major changes to improve quality, among other things a new terminology and a number of new sources, which led to a break in the time series. This means that comparisons with earlier versions must be done with great caution.

Highest completed education, Field of education, and Completion year of highest education are drawn from the Register of Education, which as of its 1992 version includes completed education up to and including the spring term of the year in question.

### **Highest educational level 1990-2011 (sun2000niva)**

The source of the variable is Statistics Sweden's Register of Education, see [www.scb.se/statistik/UF/UF0506/Produktbeskrivning\\_short\\_English\\_UF0506\\_20040101r.doc](http://www.scb.se/statistik/UF/UF0506/Produktbeskrivning_short_English_UF0506_20040101r.doc) for further information.

The level module consists of three positions, where the first digit indicates the level of the education in ISCED 97. The second digit indicates the theoretical duration of the education in number of years (except for level 0-2 where the duration of the education is not indicated). The third digit indicates the type of education. Primarily, it distinguishes between vocationally-oriented education and more general education and between education that is completed with a diploma/degree and education that is completed without a diploma/degree.

The first digit in the level module:

- 1) Primary and secondary education, less than 9 years
- 2) Primary and secondary education, 9 years (equivalent)
- 3) Upper secondary education
- 4) Post-secondary education, less than 2 years
- 5) Post-secondary education, 2 years or more
- 6) Post-graduate education

Highest completed education, Field of education, and Completion year of highest education are drawn from the Register of Education, which as of its 1992 version includes completed education up to and including the spring term of the year in question.

### **Range amount received from a main job or business 1990-2015 (forvink)**

In 1990, the variable sums Cash gross wages and salary and Income from firm (rörelse)/Income from agricultural property (cultivated).

From 1991 onwards, the variable sums Cash gross wages and salary and Income from active business activity (näringsaktivitet) if Income from active business activity is positive, otherwise the variable only accounts for Cash gross wages and salary.

For the variable Income from firm (rörelse)/Income from agricultural property (cultivated) in 1990, the part of Income from other property that in 1991-2002 is included in Income from active business activity is not included. This cannot be specified in the income statistics of 1990.

Up to and including 30 June 1992, sickness benefit (employer administration) is included in Summed income. Employer administration concerns primarily central government employees. Starting 1 January 1992, the sickness pay that the employer pays at shorter sickness absence (the first 14 days of a sickness period) is included in Summed income.

Apart from the central government employees, Summed income increases with the sickness pay amount as compared to the years 1990 and 1991. This increase concerns employees with an employment duration of at least one month, who in this way, as compared to self-employed persons on sick leave, contractors, and the short-term employed, get a larger summed income. For central government employees, as of 1 July 1992, the sickness compensation that is included in Summed income is limited to compensation for the first 14 days of the sickness period.

From 1 July 1997 to 31 March 1998, the sickness pay includes the first 28 days of a sickness period, which means that summed income to an even larger extent, during this period, includes also compensation in connection to sickness. From 1 April 1998 to 30 June 2003, the sickness pay period includes 14 days. From 1 July 2003 to 31 December 2004, the first 21 days of a sickness period are included. Starting 1 January 2005, the first 14 days of a sickness period are included.

In this aggregated version of the Swedish GGS Second Wave dataset, forvink is given five valid categories: No earning from main job or business, 1-149,999 SEK, 150,000-299,999 SEK, 300,000-449,999 SEK and 450,000 SEK or more. Information on the precise value of the range amount received from a main job or business is available in the disaggregated version of the dataset.

## **Occurrence of retirement/occupational pension 1990-2015 (aldtjptyp)**

Indication for whether an individual, during the year in question, has received retirement pension in the form of basic pension (folkpension)(1990-2002), general supplementary pension (ATP)(1990-2004), income pension (2003-), supplementary pension (2003-), premium pension (2003-), guarantee pension (2003-), occupational pension for employees in industry and commerce, employees in local authorities and regions, central government employees, employees in a state-owned enterprise (1994-), occupational pension according to an individual occupational pension agreement (1991-), occupational and supplementary pension for private sector employees (1994-), or other occupational and supplementary pension (1994-).

*Changes from 1990 onwards that may affect the occurrence of retirement/occupational pension:*

For 1990, the variable “Occupational pension according to an individual occupational pension agreement between employer and employee” cannot be accounted for since it cannot be specified in the source material to which the database has access. (In 1991, 52,402 individuals received this occupational pension.)

For the years 1990-1993, “other occupational and supplementary pension” cannot be created. Other occupational and supplementary pension includes occupational and supplementary pension for employees in cooperatives (KAP and KTP) and other smaller payers of occupational and supplementary pension. That this variable cannot be created results in an underestimation of the number of individuals with occupational pension for these years. (In 1994, 103,329 individuals received “other occupational and supplementary pension”.)

From 1993 onwards, entitlement to basic pension is assessed according to new criteria. The same rules now apply for both Swedish and foreign citizens. These rules have made it somewhat easier for foreign citizens to obtain basic pension. Also the extended opportunity to receive partial retirement pension as of 1 July 1993 may have led to an increase in the number of retirement pensioners.

In 1998, the age limit for the right to “early withdrawals” of retirement pension is raised from 60 to 61 years.

In 2003, the first payments according to the new retirement pension system take place. At the same time, sickness/activity compensation, the successor of the disability pension/sickness benefit, stop being part of the general pension system. In connection to this, the possibilities to account for the amounts being paid also differ from earlier. Before 2003, the full basic pension (folkpension) and general supplementary pension (ATP) amounts for the year in question were accounted for as disability pension/sickness benefit when the basic pension/general supplementary pension code indicated disability pension/sickness benefit for the last payment of the year. If the basic pension/general supplementary pension code indicated retirement pension for the last payment of the

year, the full amount was accounted for as retirement pension. Starting in 2003, this association between the two payment systems no longer exists.

## **Occurrence of disability pension, sickness benefit or sickness/activity compensation 1990-2015 (fortidtyp)**

Indication for whether an individual, during the year in question, has received disability pension (förtidspension), sickness benefit in the form of disability pension or sickness benefit from basic pension (folkpension) or general supplementary pension (ATP)(1990-2002), sickness or activity compensation (2003-), or complementary sickness insurance (AGS/AGS-KL)(1996-). The indication relates to the income year regardless of the year of occurrence.

*Changes from 1990 onwards that may affect the occurrence of disability pension/sickness benefit:*

The abolishment of the complementary rule (Kompletteringsregeln)(granting of disability pension due to labor market reasons) should mean that a somewhat smaller number of 60-65-year-olds are granted disability pension from the end of 1991 onwards. One year later and about a year on from that, there is a general increase in the grants of disability pension, as a number of non-rehabilitable individuals on long-term sick leave are granted disability pension. Also the extended opportunity to be granted partial disability pension from 1993 onwards may have led to an increase in the number of disability pensioners. Generally, if the number of individuals on long-term sick leave increases, the number of “disability pensioners” increases with some delay.

From 1993 onwards, entitlement to basic pension is assessed according to new criteria. The same rules now apply for both Swedish and foreign citizens. These rules have made it somewhat easier for foreign citizens to obtain basic pension.

In 1997, requirements regarding entitlement to disability pension/sickness benefit are tightened further. There are now stronger requirements that there is an association between the medical reasons and the reduction of working capacity in order to be entitled to disability pension/sickness benefit. This stronger requirement for medical causes should mean that fewer individuals from this point of time onwards are granted disability pension/sickness benefit.

Temporary severance compensation (TAE) is offered in the last half-year of 1997 to long-term unemployed individuals between 60 and 65 years. Temporary severance compensation, which can be seen as a type of disability pension for labor market reasons,<sup>1</sup> is not accounted for as disability pension. Those who are granted TAE keep the benefit until retirement pension if they have not returned to the labor market earlier.

In 2000, new rules concerning suspended disability pension are introduced and the same year there is a clarification in the rules about reduction and withdrawal of disability pension/sickness benefit. Among other things, the changed rules mean that if working capacity is significantly improved, the insured is responsible to report this even if he or she has not started being gainfully employed. If working

---

<sup>1</sup> The Swedish term for disability pension is early retirement pension. Thus, temporary severance compensation can be seen as a type of early retirement pension for labor market reasons.

capacity is significantly improved for an insured individual who receives disability pension/sickness benefit, the pension will be withdrawn or reduced.

In 2003, disability pension is replaced with sickness compensation and sickness benefit is replaced with either temporary sickness compensation or activity compensation. In connection to this change, the limit to receive compensation at long-term reduction in working capacity because of sickness is raised from 16 years to the half-year break the year a person turns 19 years, at the earliest.

While disability pension and sickness benefit were part of the general pension system, sickness and activity compensation are part of the health insurance system. In connection to this, the possibilities to account for the amounts being paid also differ from earlier. Before 2003, the full basic pension (folkpension) and general supplementary pension (ATP) amounts for the year in question were accounted for as disability pension/sickness benefit when the basic pension/general supplementary pension code indicated disability pension/sickness benefit for the last payment of the year. If the basic pension/general supplementary pension code indicated retirement pension for the last payment of the year, the full amount was accounted for as retirement pension. Starting in 2003, this association between the two payment systems no longer exists. The change in 2003 means primarily that a number of 65-year-olds from 2003 onwards show occurrence of disability pension. This occurrence existed earlier but could not be accounted for as disability pension/sickness benefit at the time.

On 1 July 2003, the rule that The Swedish Social Insurance Agency should investigate, within a year after the day of notification of illness, whether it is possible to grant the insured sickness compensation or activity compensation instead of sickness benefit, even if the insured has not applied for the compensation, is introduced.

On 1 July 2008, the opportunity to be granted temporary sickness compensation is abolished, existing payments of this type should cease by the end of 2012 at the latest.

## **Occurrence of unemployment compensation 1990-2015 (arblostyp)**

Indication for whether an individual, during the year in question, has received any unemployment compensation in the form of unemployment insurance (A-kassa)(1990-), cash labor market support according to EES agreement (1994-1997), or compensation from central government labor market fund (1994-1997).

*Information about changes to the unemployment insurance (A-kassa):*

To get daily allowance from a recognized unemployment insurance fund, an individual is required, in addition to the basic requirements, to have been a member of the unemployment insurance fund for at least twelve months (*the month condition*) and that he/she, during the last twelve-month period (the so-called reference period) has had gainful employment for at least six months and for at least 80 hours per calendar month or that he/she has worked 480 hours during a continuous period of six months with at least 50 hours of work in each month (*the work condition*).

The right to enter an unemployment insurance fund is granted to everyone who has not turned 64 years and who works for at least 17 hours per week within the unemployment insurance fund's sphere of activity. Starting 1 January 1998, there is a new unemployment insurance fund, the so-called Alfa-kassan, which is open to all professions.

The reference period (regarding the work condition), is extended with the time during which an individual were unable to be gainfully employed, e.g. because of sickness, correctional treatment, caring for own child/adopted child, time with introduction benefit for newly arrived immigrants. The discountable time is at most five years.

If an individual has received compensation earlier and is applying for it again, other than gainful employment, also labor market training, vocational rehabilitation (AMI), trainee replacement (utbildningsvikariat), temporary job (beredskapsarbete), time with start-up grant, completed education with special educational allowance (särskilt utbildningsbidrag), and at most two months as a military conscript or with parental allowance, qualify for complying with the work condition.

Starting 5 February 2001, only the gainfully employed qualify for a new compensation period. Here, also employment with individual recruitment incentive (anställningsstöd)(except special recruitment incentive), time with severance pay, employment with wage subsidy (lönebidrag), sheltered public employment, and employment within Samhall count as gainful employment. In some cases, defense duty or parental allowance (at most two months in total) may also be counted as working time.

Individuals who are or risk becoming long-term unemployed (registered as jobseeker at the Swedish Public Employment Service for at least 24 months) may be considered for the activity guarantee. An individual jobseeker plan is drawn up together with an employment officer. By entering the activity guarantee, the right to return to an initiated compensation period ceases. To be granted a new

compensation period, the applicant must fulfil the work condition once again. The change affects applicants who are registered for the activity guarantee on 1 September 2003 or later.

The compensation period is at most 300 days for individuals below 55 years and 450 days for individuals who have turned 55 years before the compensation period ends.

Starting 5 February 2001, the compensation period is at most 300 days for everyone, regardless of age. In some cases, a compensation period can be extended with at most 300 days even if an individual has not fulfilled a new work condition. This can be suggested by the Swedish Public Employment Service, while it is the unemployment insurance fund that takes the decision.

A compensation period is valid for 52 weeks if there are compensation days left after the last payment of unemployment compensation.

If an individual leaves his/her work without a legitimate reason, certain suspension rules apply. These suspension rules (when someone has left, parted from or rejected a job or a program) are tightened as of 1 January 1996.

An individual who is unemployed during a calendar week receives daily benefit for 5 days.

In 1993, a 5-day qualifying period is introduced.

In July 2007, the possibility to have the compensation period extended by 300 days is abolished. An applicant who, at day 300 of the compensation period, is a parent to a child below 18 years may still get an extended compensation period of a further 150 days. An individual who does not have any compensation days left may participate in the job and development guarantee, which is introduced 2 July. Parents with children below 18 years may, as of compensation day 301, choose between participation in the job and development guarantee or unemployment compensation.

Starting October 2007, days with unemployment compensation and activity support are added together. This means that an applicant who has been granted unemployment compensation gets at most 300 or 450 compensation days during which the applicant either is actively looking for a job with unemployment compensation or participates in a labor market program with activity support.

As of 7 July 2008, the qualifying period is extended from 5 to 7 days.

Daily benefit:

1990: 174 – 495 SEK/day (at most 91.7 % of the income before unemployment)

1991: 191 – 543 SEK/day

1992: 198 – 564 SEK/day

1 January – 30 June 1993: 210 – 598 SEK/day (may not exceed 90 % of the income before unemployment)

1 July – 31 December 1993: 198 – 564 SEK/day (compensation is lowered to 80 %)

1994 – 1995: 245 – 564 SEK/day

On 1 January 1996, the compensation level is lowered to 75 %. The daily benefit is now 230 – 564 SEK/day.

In 1998, the compensation level is raised back to 80 %. At the same time, the lowest possible daily benefit is raised to 240 SEK/day, the highest possible daily benefit is raised to 580 SEK/day.

On 2 July 2001, compensation is raised during the first 100 days of a period to at most 680 SEK/day. After that, the daily benefit is at most 580 SEK/day. If an individual has permanent employment at part-time, at most 680 SEK/day is paid for 20 calendar weeks within the first 100 days of every compensation period.

On 1 July 2002, compensation is raised to at most 730 SEK/day (for the first 100 days) and to at most 680 SEK/day (for the remaining days). This means that the unemployment insurance now provides compensation at 80 % for incomes up to 20,075 SEK (the first 100 days) or 18,700 SEK (the remaining days).

On 1 January 2007, the previous raise of the daily benefit to 730 SEK per day for the first 100 days is abolished. The new highest daily benefit is 680 SEK per day, which corresponds to 80 % of an income of at most 18,700 SEK per month.

On 5 March 2007, a gradual reduction of the compensation level in the unemployment insurance is introduced. At day 201, compensation is reduced to 70 %. At day 301, compensation is reduced to 65 %, for parents with children below 18 years, this reduction starts at day 451.

July 2007: Starting from day 201, the compensation level is 70 % for the rest of the compensation period. For parents with children below 18 years, this reduction does not start until day 301.

On 1 November 1996, the labor market program Temporary Public Employment for older people (Offentligt tillfälligt arbete, OTA) is introduced. Individuals who has OTA receive unemployment compensation during the time that the program lasts. This compensation is accounted for as income resulting from a labor market program only for those who, in 1997, receive compensation from the Swedish Social Insurance Agency (cash labor market support or equivalent), for others the amount is accounted for as unemployment compensation.

On 1 July 1997, *Project (More active use of the unemployment compensation)* is introduced. Those who are registered within this category receive unemployment compensation during the project time, which means that compensation for this program is accounted for as unemployment compensation. The program ceases to exist on 30 September 1999.

During the last half-year of 1997, the long-term unemployed are offered *Temporary severance compensation*, which can be seen as a type of early retirement pension for labor market reasons. This compensation is paid in the form of unemployment compensation although the individuals concerned no longer have to be available for the labor market. For the majority of those who have received this compensation, this amount is included, from 1997 onwards, in this variable. Exempt are those who, in

1997, received this compensation from the Swedish Social Insurance Agency paid as cash labor market support or equivalent.

On 1 January 1998, a new general and uniform unemployment insurance is introduced. The part of the new unemployment insurance that corresponds to daily benefit from recognized unemployment insurance fund is a *voluntary income-related insurance*.

The basic insurance that is included in this new unemployment insurance now replaces cash unemployment support and is also accounted for as *Compensation from unemployment insurance fund/unemployment insurance*.

For compensation according to the basic insurance, no membership condition needs to be fulfilled, but the basic conditions and the work condition must be fulfilled. Compensation from the basic insurance can be paid at the earliest on the day an individual turns 20 years.

The *study condition* means that an individual must have completed a full-time educational program which comprises at least one school year and which entitles to study social support. After that, the individual should, within a reference period of ten months in connection to the educational program, during at least 90 days, have worked or been available for employment as a jobseeker at the Swedish Public Employment Service.

On 1 January 2007, the possibility to qualify for compensation through studies (the study condition) is abolished. Transitional rules are applied.

Also in the basic insurance, the compensation period is 300 days.

1998 – 1 July 2001, compensation in the basic insurance is 240 SEK/day. An individual who is fully unemployed during a calendar week receives support for five days.

On 2 July 2001, compensation in the basic insurance (the basic amount) is raised to 270 SEK/day.

On 1 July 2002, compensation is raised to 320 SEK/day.

### ***Part-time unemployment***

1990: An individual who regularly has part-time employment and at the same time receives compensation for unemployed time may receive compensation for at most 150 days.

If an individual, during a continuous period of at least 5 months, has had employment that corresponds to the individual's labor supply or has participated in labor market training, he/she receives compensation for a new 150-day period, at the occurrence of part-time work.

1 January 1992: Work for an employer now qualifies as regular part-time employment regardless of the distribution of working time. The employment does not have to be continuous but may be fixed-term. The interruption in the part-time employment must now be at least 12 weeks in order for an

individual to be entitled to a new compensation period of 150 days (the interruption cannot have been planned if it is to provide entitlement to a new compensation period).

1 May 1993: An individual who receives compensation in connection to part-time employment should be informed that the right to compensation will be tested at regular intervals and may cease if the individual rejects any suitable job or labor market program that has been offered to him/her.

On 1 September 1995, the compensation rules for individuals with part-time employment are tightened. An individual who regularly performs part-time work during weeks that he/she is otherwise unemployed and who, at the end of the compensation period, continues a permanent employment at part-time is not entitled to compensation for the new compensation period, as long as the permanent employment continues. Neither does a new permanent employment at part-time that is commenced within three months from the expiration of the previous permanent employment at part-time entitle to compensation. According to transitional rules, limitations to the right to compensation are not put into practice for individuals whose compensation period ended during the period 1 September 1995 to 31 December 1995 until 1 January 1996. An individual who quits a part-time employment because of insufficient right to compensation is considered to have a legitimate reason and should not be suspended because of this.

If an individual worked full-time before unemployment and gets a part-time job, he/she is considered to be unemployed up to full-time and is granted compensation for the unemployed time. If an individual has worked full-time earlier, the requirement is that he/she is unemployed for at least seven hours in a week for compensation to be paid.

On 7 April 2008, a new limitation rule in connection to part-time unemployment is introduced. The part-time unemployed are now only entitled to 75 compensation days per compensation period. The 75 compensation days start being counted on 7 April 2008. The limitation rule applies to all types of employment. The limitation rule applies only to days with unemployment compensation, not to days with activity support. Qualifying period days are not included in the 75 days. If an individual works part-time mixed with full weeks of unemployment, he/she may receive compensation for full unemployed weeks besides the part-time limitation of 75 days.

## **Occurrence of student income 1990-2015 (studtyp)**

Indication for whether an individual, during the year in question, has received any student income in the form of study funds (studiemedel) and study support (studiestöd) (loan/allowance), special adult study support (1990-1996), adult study support/special adult study support (loan/allowance part, unemployed/others)(1997-2003), special educational allowance – Adult education initiative (Kunskapslyftet)(1997-2003), short-term study support (1990-2001), Swedish for Immigrants (1990-1998), hourly compensation in connection to reading and writing difficulties (1990-2001), educational allowance for PhD students, or recruitment allowance (2003-2008).

*Changes 1990-2013 that may affect the outcome:*

As of today, there is, in the database, only information about students whose studies are publicly financed. The total number of students is therefore somewhat underestimated and insofar as studies to a greater or lesser extent have been publicly financed over the years, Occurrence of student income is also affected.

In the end of the 1980s, the number of student places at university started to increase, e.g. through the introduction of the engineering program. Starting in autumn 1991, there was an extensive, more general, expansion of university education, primarily via separate courses. A change in the admission rules was made in autumn 1991, aiming, among other things, to increase the proportion of younger people at university.

The increase in the number of students in upper secondary school in the 1990s is largely due to the introduction of the individual program. Another reason is that three-year programs gradually replace the previous shorter programs and the special programs. Starting in the school year 1991/1992, there is also a growing number of student places in the form of a third upper secondary school year. A new upper secondary school reform, which is carried out during the first years of the 1990s, means that every municipality is responsible for offering education to all youth up to 20 years (in 1990, 87 % of those who had just finished compulsory school were admitted to upper secondary school, in 1994, 98 % were admitted).

Grundvux (education for adults with reading and writing difficulties) ceases to exist in the school year 1991/1992. Those who had begun their studies before 1 July 1991 are allowed to finish them in the school year 1991/1992.

The funds and the possibilities to receive special adult study support (allowance, unemployed) has increased during the 1990s, at the start of the decade, the possibilities were limited to certain counties. Primarily, this grant increase took place from the school year 1992/1993 to the school year 1993/1994. Up to and including the school year 1992/1993, the lower age limit for having the right to receive special adult study support (allowance, unemployed) was 25 years, after this it became 21 years.

The short-term study support has had the opposite development as the allocated funds were cut with 165 million SEK from the school year 1991/1992 to the school year 1993/1994. At the same time, the collective application procedure has been abolished and starting in 1993, students who have more education than two-year upper secondary school can no longer receive short-term support.

For 1993, there is no information about study support for those students who finished or started their studies during the autumn term. This means that the number of students in the younger age groups are strongly underestimated this year.

For 1994-1996, study help (studiehjälp) is accounted also for those who turn 16 during the last quarter of the year, which only happens in exceptional cases for the other years. The educational remuneration (utbildningsarvode) for some teacher programs changes its target group between the school years 1992/1993 and 1993/1994 and starting in the school year 1995/1996, adult study support is given also to those who participate in some natural science and technological university programs.

On 1 July 1997, the special educational allowance (UBS), which is granted to participants in the Adult education initiative (Kunskapslyftet), is introduced. The special educational allowance is, contrary to the special adult study support/special adult study support (unemployed), fully an allowance. The establishment of the special educational allowance meant a big increase in the number of study support recipients. Participation in the Adult education initiative reached its climax in 1998, when 123,000 individuals received the special educational allowance. The number of student places within the Adult education initiative has since decreased. At the end of 2002, UBS ceases to exist.

In 1999, the possibilities to be granted special study support (unemployed) for studies at upper secondary level is extended from two to four terms.

The 2001 study support reform means, among other things, that special adult study support/special adult study support (unemployed) is replaced by study funds (studiemedel). For groups with a relatively high income before the studies, the reform may mean reduced educational participation and for individuals with a low income before the studies, increased educational participation. The short-term support ceases to exist as does the possibility to account for individuals who have received hourly compensation in connection to reading and writing difficulties when this, since 1 July 2001, is administered by Sisus.

In 2003, a recruitment allowance is introduced. As with the special educational allowance (UBS), the recruitment allowance is fully an allowance. Anyone who has a short education and is unemployed/at risk of becoming unemployed/has a disability may receive this allowance.

Starting in 2007, the possibility to receive recruitment allowance ceases to exist. A limited number of students received recruitment allowance in 2007 and 2008 based on special transitional rules.

## **Occurrence of social welfare (family member) 1990-2015 (socbidrtypf)**

Indication for whether an individual belongs to a family that, during the year in question, has received social welfare (socialbidrag).

Observe that this variable is based on a household-related benefit and that the quality in the information is dependent on the extent to which the total population register family corresponds to the actual social welfare household.

### ***Housing allowance***

The housing allowance is paid to families with children and to youth 18-28 years old. During the period 1991 to 1995, also other families or single people without children could be granted housing allowance. Housing allowance to families with children are available to both the married and the cohabiting with joint children and to single people with children. The housing allowance is untaxed.

### ***Housing allowance to families with children***

The housing allowance consists of two parts. The first part is a *special allowance for children living at home* and varies with the number of children in the family (the number of children below 18 years or who still have study support or extended child support). The second part is an *allowance for housing costs*. An individual who has children living at home is entitled to both parts of the housing allowance while an individual who periodically has children living at home is entitled to allowance for housing costs. At joint custody, the parent at whom the child is registered receives the *special allowance for children living at home*.

How big the housing allowance gets depends primarily on the size of the income, housing costs, floor area, and the size of the family. The right to housing allowance is assessed based on the allowance qualifying income. Wealth may also affect the housing allowance.

To get housing allowance for housing costs, the individual must have their own housing and be registered there. For the special allowance for children, there is no requirement for individuals to have their own housing. The housing allowance is not always calculated based on the full floor area. The allowance qualifying floor area depends on the number of children. For children with families, there are also guaranteed levels for the housing cost. Households may include housing costs up to the guaranteed level but at most the actual cost.

### ***Housing allowance to youth and other households without children***

The housing allowance to youth 18-28 years old can be granted to youth living in their own housing, whose housing costs exceed a specified amount and whose incomes are small.

In 1997, a new means test system is introduced which means that the final housing allowance is established only after final income taxation. If an individual has received a preliminary allowance that

is too low, he/she will receive an additional allowance, and if an individual has received a preliminary allowance that is too high, he/she will become obligated to repay.

Further rule changes are, e.g., that capital gain and part of wealth above 100 000 SEK are now included in the allowance qualifying income and that an individual income limit is introduced also for cohabiters.

*Because of the rule changes that were introduced in 1997, the number of households with housing allowance decreased heavily this year. The monthly average (the number of households with housing allowance) was, according to the National Social Insurance Board (RFV), 458,700 households in 1996, which decreased to 352,300 households in 1997.*

### **Occurrence of parental leave compensation 1990-2015 (forledtyp)**

Indication for whether an individual, during the year in question, has received parental leave compensation in the form of parental benefit at the birth of a child or adoption, temporary parental benefit for care of children, care allowance (vårdnadsbidrag), municipal care allowance (2011-). The indication relates to the income year regardless of the year of occurrence.

*Changes from 1990 onwards that may affect the outcome:*

The number of days with parental benefit is increased with 90 days in 1995 (for parents to children born in October 1988 or later) and with a further 30 days in 2002. At the same time, in the case of joint custody, 30 days are reserved for each of the parents (for children born in 1995 or later) and a further 30 days in 2002.

With the introduction of the care allowance in autumn 1994, the 90 guarantee days temporarily disappear, as the care allowance is not part of the material for this variable.

In 2011, a municipal care allowance is introduced, which is part of this variable.

### **Parental benefit, number of gross days 1993-2015 (forpeng\_bdag)**

The number of paid days, all days are full days, during a year, regardless of the extent.

In this aggregated version of the Swedish GGS Second Wave dataset, forpeng\_bdag is given five valid categories: 0 days, 1-91 days, 92-183 days, 184-274 days, and 275 days or more. Information on the precise value of the number of gross parental benefit days is available in the disaggregated version of the dataset.

### **Parental benefit, number of net days 1993-2015 (forpeng\_ndag)**

The number of net days is the number of gross days \* the extent during a year.

10 \* full extent = 10 net days,

10 \* three quarters extent = 7.5 net days,

10 \* half extent = 5 net days,

10 \* one quarter extent = 2.5 net days,

10 \* one eighth extent = 1.25 net days

In this aggregated version of the Swedish GGS Second Wave dataset, forpeng\_ndag is given five valid categories: 0 days, 0.01-91.99 days, 92.00-183.99 days, 184.00-274.99 days, and 275.00 days or more.

Information on the precise value of the number of net parental benefit days is available in the disaggregated version of the dataset.

### **Introduction to the partner variables**

The following set of variables relate not to the respondent him-/herself but to the respondent's partner at Wave 1. These variables are constructed identically to others already presented in this codebook, which means that the description of a "respondent variable" apply also to the respective partner variable. See the list below for page numbers:
