The completion and publication of this codebook marks the end of a long and worthwhile process of data collection, data cleaning and data organizing, and last but not least data documentation. We thank the sponsors of The Swedish Housing and Life Course Cohort Study: Byggnads, Folksam, HSB, Hyresgästföreningen Riksförbundet, Riksbyggen, and Svenska Byggnadsutvecklingsfonden. We also thank The Swedish Research Council's support through the Linnaeus Center on Social Policy and Family Dynamics in Europe (SPaDE) and the Stockholm University SIMSAM Node for Demographic Research (SUNDEM), as well as the Swedish Institute for Futures Studies in financing the work with the codebook.

The Swedish Housing and Life Course Cohort Study (HOLK)

The Swedish Housing and Life Course Cohort Study (HOLK) was originally designed to study the relationships between housing and childbearing. Its detailed housing biographies – described below and in the codebook – gives access to information that is neither included in register data nor in census data or previous surveys. For example, information on unregistered moves and tenant holder are missing in register data. Both census data and previous surveys include detailed information on characteristics not covered by register data. However, censuses have not been carried out in Sweden since 1990, and previous surveys that include housing factors do not contain biographical data and the longitudinal surveys are collected at distant points in time.

The HOLK-data are a combination of survey and register data. The sample consists of 3 600 individuals born in Sweden, and is divided between three birth cohorts born in 1956, 1964 and 1974. The cohorts are selected in order to reflect different historical periods in Swedish housing policy and labor market. The data collection was carried out during the spring of 2005 and was administered by Statistics Sweden in Örebro. The method of collection was postal questionnaires with one postal follow-up and a subsequent telephone follow-up. The response rate was 62 percent or 2 242 individuals. As a whole, the data provides a clear picture of partner biographies, education and labor market attachment, childbearing and last but not least housing biographies. Register data have been linked with additional information on the respondents, their legally married partners, and for unmarried cohabitants with children the child's remaining parent. Not only register data on current partners, but such data on all partners that can be detected in the registers have been linked to the survey data. The central part of the questionnaire is the housing biographies. The housing biographies have been complemented with register data on registered moves with information on year, month and location of the move. Another important component is the partner- and marriage biographies that enables us to determine under what family conditions individuals are “under risk” for childbearing. These self-reported biographies have been complemented with register data on registered changes in civil status.

Information on education for both respondents and their partners has been gathered from register data (for any current partner also through the questionnaire). Extensive register data on incomes and transfers have also been linked. This makes it possible to follow individuals' labor market attachment from the entry into the labor market and onwards. When possible (mostly from the 1990s and onwards) register data on occupation and workplace have been linked, too. Finally, data on biological and adopted children have been linked. In addition, a number of attitudinal questions and questions directly linked to family, children and housing are included in the questionnaire. One example is a question on whether the respondent experienced that the family became crowded or that the housing standard was insufficient subsequent to the birth of each child. In summary, the data provides an important contribution to both Swedish and international research.

The register data has been updated with variables for 2004-2007. Macro-level data on housing, housing policies etc. for the years covering HOLK have also been collected: SRRD_2011:21 Ström, Sara and Johan Carlsson Dahlberg, The Swedish Housing and Life Course Cohort Study: Contextual Database

To use the codebook with the datasets

This codebook is linked to four datasets: HOLK.[ext], HOLK-partner.[ext], HOLK-update.[ext] and HOLK-update_partner.[ext]. The first dataset contains complete survey and register data for the respondent and all register data except moves and childbearing for partners. HOLK-partner.[ext] contains data on partners using the partner as observational unit. HOLK-update.[ext] contains the update of register data 2004-2007 for the respondent, while HOLK-update_partner.[ext] contains the corresponding variables for the spouses. As will be shown below, the partner biography is the prerequisite for matching partners to respondents. As the partner biography is only available in survey data, the updated spouse register variables have not been matched to the respondents. For detailed information on the variable contents regarding variables for spouses and the update, please see corresponding variables for the respondent. Data will be made available through the Swedish National DataService, <http://snd.gu.se/>. Until this is possible, data is available upon request from SUDA.

The capital letters in the beginning of the variable names indicate which area the variable regards. They are interpreted as follows and occur separately and combined.

A	Attitudes
B	Background
C	Children
E	Education
H	Housing
O	Occupation
R	Register data
Q	Variables which is mainly for administrative purposes, such as date of registration etc. Also contain variables on current income and marital status
S	Variables for the spouse/partner
U	Union status or union changes

Missing values are represented by -1, 8, 9, 88, 99, 188, 888, 999 and 9 999 where -1=does not apply, 8, 88 and 888=Does not want to answer, telephone interview and 9, 99, 188, 999 and 9 999=missing/do not know.

Description of the variables

V1

ID

ID

ID is a seven digit randomly select identification code starting with 25.

BACKGROUND: ADMINISTRATIVE VARIABLES, I

V2 **Qbox** **Box**

The variable Qbox is a three-digit variable created for administrative purposes. Questionnaires that have been answered by telephone have no Qbox-number.

V3 **QInfl** **Code/Inflow**

	Frequency	Percent
10 First postal questionnaire	1184	52,8
11 Telephone interview	602	26,9
15 Postal follow-up	456	20,3
Total	2242	100

V4 **Qcounty** **County of residence**

County of residence, at time of sampling. Appendix 2 gives a total list of the coding of the counties.

County of residence	Frequency	Percent
1 Stockholm	440	19,6
3 Uppsala	76	3,4
4 Södermanland	63	2,8
5 Östergötland	90	4,0
6 Jönköping	80	3,6
7 Kronoberg	44	2,0
8 Kalmar	61	2,7
9 Gotland	17	0,8
10 Blekinge	25	1,1

23 Jämtland	31	1,4
24 Västerbotten	73	3,3
25 Norrbotten	65	2,9
Total	2242	100

V5 **Qmunicipality** **Municipality of residence**

Municipality of residence, at time of sampling. Appendix 2 gives a total list of the coding of the municipalities.

V6 **Qcivil** **Civil status**

Civil status, at time of sampling.

	Frequency	Percent
1 Unmarried	1000	44,6
2 Married	1030	45,9
3 Divorced	193	8,6
4 Registered partner	3	0,1
5 Widow/Widower	16	0,7
Total	2242	100

V7 **Qincome** **Income in 1 000 SEK**

Total yearly income in 1 000 SEK the year prior to sampling.

V9 **Qcal_weight** **Weight**

In order to compensate for sampling errors (i.e. that only a sample of the population is studied) and attrition errors (i.e. that non-respondents may diverge from respondents) a calibration weight has been constructed. Help vectors was constructed using birth cohort, gender, civil status, income, education, urban residence, children, and occupation. Using register variables from RTB, RAMS, IoT and Flergenerationsregistret help totals were constructed. The help vector and the help totals were used in constructing a calibration estimator, i.e. Qcal_weight.

The variable is based on 'OPses' and 'SOPses' and takes its value from the partner with the highest SES code. If any of the spouses has a SES code between 99 and 999 and the other has a code between 12 and 89, OPses_household takes its value from the one with the code between 12 and 89. If both the spouses have a code between 99 and 999, OPses_household takes its value from the respondent's SES code. If the respondent does not have a partner, OPses_household is simply a grouped version of OPses.

PARTNER BIOGRAPHY

Om du nu är eller tidigare har varit gift/sambo, ber vi dig anteckna vilket/vilka år och vilken/vilka månader som varit aktuella.

If you are, or have been, married/cohabiting, we ask you to list the years and months in question.

If data is missing on either year or month, the year and months of the partner biography have been imputed as follows:

If the respondent could not remember the month of the change he/she was asked to report whether the change occurred in the winter, spring, summer or fall. This was later coded as winter=02 (February), spring=05 (May), summer=08 (August), and fall=11 (November).

If a month is missing, but the year of the change in partner status coincides with a change in registered residence, the month of the move imputed in the partner biography.

If the year of move in the housing biography was adjusted due to matching type 4 (see v237-v247 below), the year of changes in the partner biography was adjusted the same way.

Months still missing were imputed as 06, i.e. June.

V51-56 **Ustart[1-6]flag_a** **Ustart[1-6]flag_a**

V57-62 **Uend[1-6]flag_a** **Uend[1-6]flag_a**

In the partner biography described above some misreporting and scanning errors were detected. Therefore, a series of dummy variables have been constructed that take the value 1 if a variable has been altered. Variables 51 through 62 takes the value 1 if the year in question has been changed at all compared to the original data.

V63-68 **Ustart[1-6]flag_b** **Ustart[1-6]flag_b**

V69-74 **Uend[1-6]flag_b** **Uend[1-6]flag_b**

Variables V63 through 74 takes the value 1 if the alterations of changes identified in Ustart[1-6]flag_b/Uend[1-6]flag_b are identical to a change of year in the housing biography, due to matching type 4.

US_ID[1-6]**ID of partner [1-6]**

The partner biography has been linked to registers on changes in civil status and childbearing. Thus, we have been able to link partners either married to the respondent or who have a common child with the respondent. For those partners, an ID has been constructed in the same way as the ID for the respondent. If the partner cannot be matched in register data the variable takes the value 0.

HOUSING BIOGRAPHY

The respondents were asked to report all dwellings in which they have lived 6 months or more (maximum 11 dwellings). They were also asked to report the number of people who lived in each dwelling, whether it was rented or bought, whether it was a detached house or an apartment etc. The information provided by the housing biographies has been linked to the dwellings registered in the Register of domestic moves (Registret över inrikes flyttningar). Further, when the survey data on year of move (Hdate[1-11]) is incomplete, the registers have been used to impute the missing values as described in the description of **Hflag[1-11]a** and **Hflag[1-11]b** (variables 226 through 247).

Hcmp[1-11]**County, municipality,
parish, [1-11]th dwelling**

Hcmp[1-11] describes the county, municipality and parish where the dwellings are located. Hcmp[1-11] is created through the matching process described below (see Hflag[1-11]). For dwellings that cannot be matched, Hcmp[1-11] (1) takes the value from the following dwelling or, if no such Hcmp exists, (2) takes the value from the previous dwelling. The values contain five or six digits, where the last two digits of each value refer to the parish. See Appendix 2 for a full description of the counties and municipalities of Sweden.

V227-237

Hflag[1-11]a**Hflag[1-11]a**

Seven different types of matching (see V238-248 for further information on the matching process) have been performed in order to link the housing biographies in the questionnaire to the dwellings in the register of domestic moves. To make it possible to follow the matching between survey and register data, two types of flags have been created.

Hflag[1-11]a describes to which registered dwelling (i.e. HRdate[1-25], V374-398) a dwelling in the housing biography is linked.

Hflag[1-11]b states by which matching type a move reported in the housing biography is matched or imputed by. The values are to be interpreted as follows:

- 1 A perfect match. The year reported by the respondent in the questionnaire occur the same number of times in the register.
- 2 The year reported by the respondent occurs more times in the register compared to the questionnaire. Since only dwellings lasting more than 6 months are requested in the questionnaire, the dwelling with the longest duration is chosen from the register.
- 3 For the year in question, there are more dwellings reported in the questionnaire compared to the register. The registered move is matched to the dwelling with the more stable housing arrangement, i.e. tenancy is prioritized over sub-tenancy, owning over renting, and stable arrangement over student dwelling.
- 4 If there were still unmatched dwellings after the first three procedures had been performed, a manual check on whether this was likely to be due to misreporting was performed. A maximum limit of three years misreporting is accepted, however most matching occurs within the two preceding or following years. When applying the 4th principle, a consequence is that sometimes a match of type 1, 2 or 3 is changed to a match type 4, due to chains of errors in misreporting which push all the matching forward or backward. In matching of type 4, scanning errors discovered late in the cleaning process are also included.

- 5 The dwelling could not be matched to a dwelling in register data. If the year of a move coincides with a change in union status, the month of the change of union status is used to impute the month of the move. This is the case since the questionnaire only covers *years* of moves.
- 6 The dwelling is not matched to a move in register data. If the following dwelling is a student's home, the month is imputed by 8, since this is when the term starts and students are most likely to move.
- 7 The dwelling is not matched to a registered move and was not imputed by principles 5 or 6. The principle is based on whether there are any other matched dwellings the same year, in which case the month for the unmatched dwelling is 1 or 7 (i.e. January or July), depending on whether the other move takes place in the beginning or the end of the year. In the case of no other matched dwellings the same year, the unmatched dwelling is set to 6 (i.e. June). Nine unmatched residences have been manually imputed in view of change in housing, child or partner biography.
- 8 The dwelling is abroad, and is therefore not detectable in the registers. In cases where a change in registers occurs the same year, the month is taken from this registered dwelling. Further, in cases where an imputation has already been made from principle 5 or 6, the months derived from this are used. Otherwise, the month of the move is set to 6, i.e. June.

Caution

The SUN codes initially consisted of five digits, but were transformed to three digits in 2000. Thus, in order to make data from different periods comparable, the coding for the years 1985-1999 has been altered. For this purpose, a key provided by Statistics Sweden has been used to convert the old five-digit codes to the new three-digit SUN 2000 format. Where no such key is provided, the old five-digit codes remain (a total of eight cases, these are listed as >1000 in the tables below). Due to this alteration comparisons of data 1985-1999 on the one hand and 2000-2003 on the other hand needs to be made with caution. Further, alterations in the definitions of different educations have had effect on the statistical dispersion of the variables. For instance, the educational level in Sweden has seemingly changed to a disproportionate degree between 1989 and 1990. This is partly a consequence of the change of komvux (municipality adult education) in the SUN code in 1989, to equal a year upper secondary school degree in 2000. Besides this, people without a degree, but with more than 120 university points, have been transferred to the group 'upper secondary education, three years or longer', which makes it appear as if the educational level increase when in fact the definition has changed. Another reason for this change, which is also the case for the disproportionately large changes between 1999 and 2000, is that education has not previously been reported continuously. Educations has thus been cumulated during the previous years, but reported in 1990 or 2000, respectively. Therefore, dummies for 1990 and 2000 are advisable when using educational level as a time series data, and caution is important when comparing old data (1985-1999) with newer data.

REGISTER DATA: INCOME

The data on income is taken from the Income and Taxation Register (Inkomst- och Taxeringsregistret, IoT). The Income and Taxation Register is compiled annually, covering Sweden's entire population, and contains data on income from work, total earned income, income from capital, taxes, deductions, transfer payments (allowances) and taxable wealth. All the values in the income section (V635-1121) are given in Swedish kronor (SEK) and all values have been adjusted for inflation according to the Consumer Price Index (CPI). The year 2003 serves as reference base. For a full list of the CPI-weights for each year, see Appendix 4.

V635- 666 **Rcdisp[1972-2003] Disposable income [1972-2003]**

For the years 1972-1977 Rcdisp[1972-2003] has been created by using the total income from employment and business subtracting taxes (federal and state taxes, local tax and wealth tax). From 1978 and onwards the variable is the sum of income plus taxable and tax free transfers minus taxes and negative transfers. Thus, the variables Rcdisp[1972-1977] are not completely comparable with the measures of disposable income for the following years. The variable value "0 No disposable income" includes, for the years 1972-1977, those who have no disposable income and from the year 1978 and onwards those who have no disposable income and those who have a negative disposable income.

REGISTER DATA ON PARTNER: BACKGROUND VARIABLES

For each year, a partner variable is constructed. This variable takes the value 0 if the respondent is cohabiting with a partner and they have no common children (and we thus do not have any ID on the partner). The value is 'missing' if the respondent is not cohabiting or married during the year. In all other cases, the variable takes the value of the partner's ID. If more than one partner exists during the same year, the one who is connected to the respondent the greater number of months is chosen. If more than one partner exists during the same year, but we only have ID for one of them, this one is chosen, regardless of how many months they have been connected during the year.

For the partners we have an ID for, we have the same yearly information on income, education, occupation, parish of residence and changes in civil status as we have on the respondent. The names of these variables are the same as for the respondent, but with an 'S' prefix. **SR_IDXXXX** collects the ID immediately, even if the respondent and the partner do not marry until later. If, for instance, a couple start cohabiting in 1970 and marry in 1980, we will have the ID of the partner from 1970 and onwards. To include changes in civil status, e.g. from cohabiting to marrying, this variable is thus not useful. For that purpose, the three variables **UR_civ_dateX**, **UR_civ_prevX**, and **UR_civ_newX** are of better use. For the years the respondent is not co-residing with the partner, information on the partner is found in the partner file.

For description of variable contents, see descriptions of corresponding variables for the respondent.

HOLK-PARTNER.[ext]

DESCRIPTION OF THE VARIABLES

The partner file contains data on all available partners organized by partner and thus covers all available years (maximum 1972-2003). For description of variable contents, see descriptions of corresponding variables for the respondent.

V1 **SR_ID** **SR_ID**

The SR_ID is a one to four digit randomly select identification code. The dataset includes 1 926 unique partners.

HOLK-UPDATE_PARTNER.[ext]

DESCRIPTION OF THE VARIABLES

The update file contains data on the update of register data for the partners 2004-2007. Compared to the data collected in 2005, there are a number of additional partners in the update (since they were not yet partners at that time), and a few partners have for some reason been excluded from the update. In the update files no joint variable for the ID of the respondent that the partner is linked to was provided. Thus, to link partners included in the update but not in the original data in 2005 to respondents one needs to use the variables SRCparentU[1-2] and SURid_partnerU. For descriptions of variable contents, see descriptions of corresponding variables for data 1972-2003.

V1 **SR_ID** **SR_ID**

The SR_ID is a one to four digit randomly select identification code. The dataset includes 2 212 unique partners.

APPENDIX 1: QUESTIONNAIRE

Bostad, arbete, barn – En svensk generationsstudie

Vi vet idag nästan ingenting om hur människors boende påverkar deras barnafödande, och vilken roll anknytningen till arbetsmarknaden spelar i detta.

I denna undersökning kommer för första gången ett stort urval av den svenska befolkningen att få berätta om sin boendehistoria. Enkäten du nu håller i din hand har skickats ut till 3 600 svenskar ur tre olika generationer. Du är en av dem!

Statistiska Centralbyrån har dragit urvalet du ingår i och hämtat adressuppgifter från Registret över totalbefolkningen (RTB). Undersökningen genomförs av SCB på uppdrag av Institutet för Framtidsstudier. Resultaten kommer att publiceras i olika rapporter och artiklar.

Enkätsvaren kommer att ingå i ett nytt och fullständigt unikt datamaterial. Din medverkan är frivillig, men dina svar är viktiga för att bilden ska bli så rättvisande som möjligt. Materialets tillförlitlighet beror till stor del på hur många som svarar. Ingen kan ersätta dig!

Vi vill att du redogör för din boendehistoria, vilket säkert är en enkel uppgift för den som flyttat få gånger. Om du flyttat många gånger är det kanske svårare. Vi ber dig att ägna en stund åt enkäten och försöka minnas hur du bott tidigare i livet. Inne i enkäten finns en guide som vi utvecklat för att hjälpa dig att minnas lättare.

Dina svar skyddas enligt 9 kap. 4§ sekretesslagen (1980:100) samt av bestämmelserna i personuppgiftslagen. Detta innebär att alla som arbetar med undersökningen har tystnadsplikt och att de insamlade uppgifterna redovisas i tabeller där ingen enskilda svar kan utläsas. Numret högst upp på blanketten är till för att SCB ska kunna se vilka som har svarat och vilka som ska få en påminnelse.

Materialet avidentifieras när insamlingen är avslutad, och överlämnas sedan till Institutet för Framtidsstudier för fortsatt bearbetning.

För att inte belasta blanketten med uppgifter som redan finns hos SCB kommer de svar du lämnar att kompletteras med uppgifter om kön, ålder, civilstånd, folkbokföringsförhållanden, utbildning, taxerade inkomster, förmögenhet, bidrag och ersättning från försäkringskassa, arbetslöshetskassa, m.m. förtidspension samt uppgifter rörande din sysselsättning. Dessa uppgifter hämtas från befolkningsregistret, inkomstregistret och ett register om utbildning och sysselsättning. Uppgifter kommer också att hämtas för eventuell make/maka/sambo och barn. En nyckel sparas på SCB så att vi kan komplettera undersökningen med nya registerdata inom tre år. Någon ny enkät kommer alltså inte att skickas ut.

Om du har några frågor om undersökningen är du välkommen att kontakta Sara Ström på telefon 08-402 12 13 eller e-post sara.strom@framtidstudier.se. Frågor om datainsamlingen besvaras av Inga-Britt Svalstedt telefon 019-17 61 05 eller e-post inga.svalstedt@scb.se. På webbplatsen <http://www.framtidstudier.se/boende.shtm> kan du läsa mer om undersökningen.

Ett stort tack på förhand för din medverkan!
